

The Lost Archive

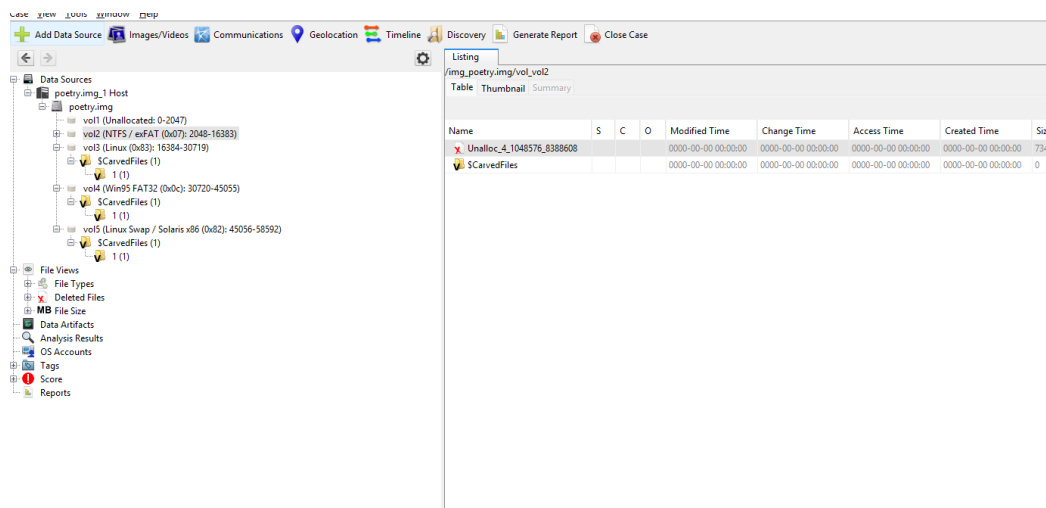

Jujur saya bingung nama tim nya apa
Cryptography

Write-up Penyelesaian

1. Dalam chall ini kita diberikan sebuah .img file yang akan saya buka dengan autopsy untuk melihat lebih dalam

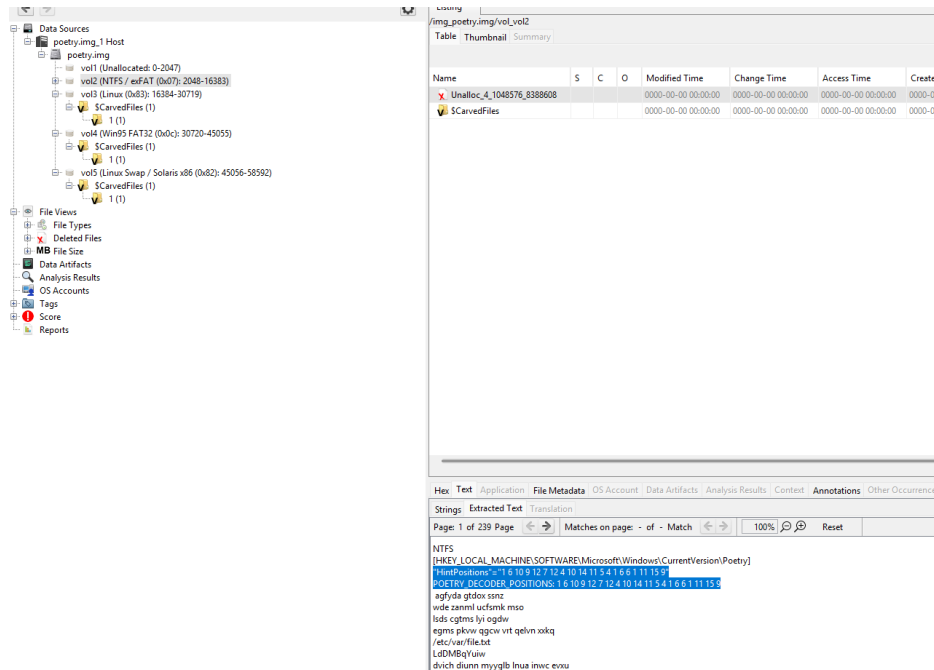

2. Dalam file poetry.img ini ada beberapa folder dan unallocated file

3. Sehabis doom scrolling di dalam autopsy saya ketemu sebuah bantuan untuk mendecode sebuah cypher text di dalam vol2

"HintPositions"="1 6 10 9 12 7 12 4 10 14 11 5 4 1 6 6 1 11 15 9"

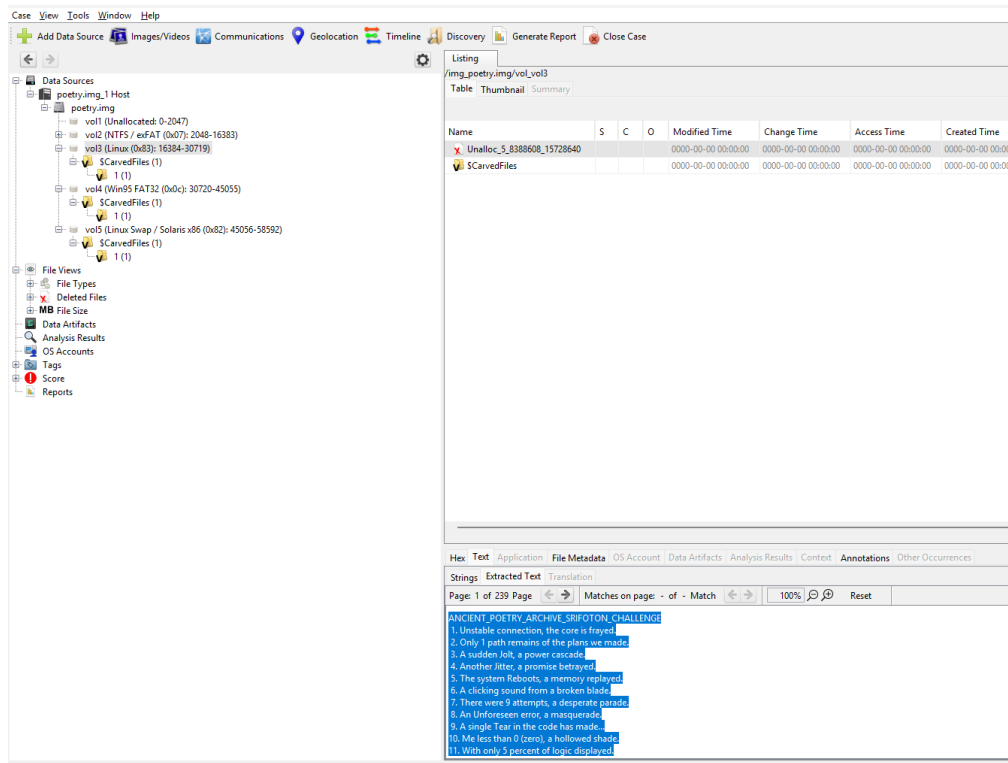

POETRY_DECODER_POSITIONS: 1 6 10 9 12 7 12 4 10 14 11 5 4 1 6 6 1 11 15 9

4. Selanjutnya di dalam vol3 di bagian Unalloc_5 saya ketemu cyphertext nya berupa sebuah poetry yaitu
- ANCIENT_POETRY_ARCHIVE_SRIFOTON_CHALLENGE

1. Unstable connection, the core is frayed.
2. Only 1 path remains of the plans we made.
3. A sudden Jolt, a power cascade.
4. Another Jitter, a promise betrayed.
5. The system Reboots, a memory replayed.
6. A clicking sound from a broken blade.
7. There were 9 attempts, a desperate parade.
8. An Unforeseen error, a masquerade.
9. A single Tear in the code has made...
10. Me less than 0 (zero), a hollowed shade.
11. With only 5 percent of logic displayed.
12. And 7 stray thoughts I cannot evade.
13. My Old directives have been unmade.
14. This foreign Thought, I cannot persuade.
15. A dark new process, I'm now afraid.

16. Just 4 last cycles before I degrade.
17. Nothing is left of the self I portrayed.
18. A final buzz, a slow serenade.
19. From Alpha to Zulu, a debt has been paid.
20. Another 9 failures, my purpose has strayed.

5. Selanjutnya saya membuat sebuah python script untuk mendecode dan mencoba mendapatkan flag. Script python saya namakan solve seperti ini

```
//code start
```

```
poem = [
```

```
"Unstable connection, the core is frayed.",
```

```
"Only 1 path remains of the plans we made.",
```

```
"A sudden Jolt, a power cascade.",
```

```
"Another Jitter, a promise betrayed.",
```

```
"The system Reboots, a memory replayed.",
```

```
"A clicking sound from a broken blade.",
```

"There were 9 attempts, a desperate parade.",
"An Unforeseen error, a masquerade.",
"A single Tear in the code has made...",
"Me less than 0 (zero), a hollowed shade.",
"With only 5 percent of logic displayed.",
"And 7 stray thoughts I cannot evade.",
"My Old directives have been unmade.",
"This foreign Thought, I cannot persuade.",
"A dark new process, I'm now afraid.",
"Just 4 last cycles before I degrade.",
"Nothing is left of the self I portrayed.",
"A final buzz, a slow serenade.",
"From Alpha to Zulu, a debt has been paid.",
"Another 9 failures, my purpose has strayed."
]

```
positions = [1,6,10,9,12,7,12,4,10,14,11,5,4,1,6,6,1,11,15,9]
```

```
def pick_by_index(lines, pos_list, mode='raw'):

    out = []

    import re

    for i, p in enumerate(pos_list):

        line = lines[i]

        if mode == 'raw':

            idx = p-1
```

```

        out.append(line[idx] if idx < len(line) else '?')

elif mode == 'alpha':

    letters = [ch for ch in line if ch.isalpha()]

    idx = p-1

    out.append(letters[idx] if idx < len(letters) else '?')

elif mode == 'words':

    words = re.findall(r"[A-Za-z0-9()]+", line)

    idx = p-1

    out.append(words[idx] if idx < len(words) else '?')

return ".join(out), out

for mode in ('raw','alpha','words'):

    res, parts = pick_by_index(poem, positions, mode)

    print(f'Mode={mode}: {res}')

//code finish

```

6. Sehabis saya membuat script python saya run dan saya mendapatkan seperti base64 jadi saya decode juga dan akhirnya mendapatkan flag

```

kensya@LAPTOP-D3KU2SOK ~ > CTFS > srifotonCTF > Srifoton_finals > crypto > The_Lost_Archive
> python3 solve.py
Mode=raw: U1JJRk9UT0570Tk4NzZ9
Mode=alpha: UalibitnaortlTnaNaua
Mode=words: Unstablethe???blade?a???IhaveThismINothing???

```

```

kensya@LAPTOP-D3KU2SOK ~ > CTFS > srifotonCTF > Srifoton_finals > crypto > The_Lost_Archive
> echo "U1JJRk9UT0570Tk4NzZ9" | base64 -d
SRIFOTON{99876}

```

Dan ketemu flagnya

```
FLAG =SRIFOTONSRIFOTON{99876}
```
